Ref. ICAF-L-INSULTEC080408

Subject: Insulation materials provided by Insultec, Inc.

TO WHOM IT MAY CONCERN

This is to confirm that ICA Fluor Daniel awarded a contract to Insultec Inc. for the supply of insulation materials for the Indelpro facility "Polypropylene Line 2 and Splitter Revamp" in Altamira, Tamaulipas, Mexico.

The final contract price was approximately US\$540,000.00. Insultec performed a detailed takeoff from the drawings and isometrics that we supplied them and calculated all the insulation, cladding and accessory materials required for the project. Insultec provided us with detailed takeoff information, showing what materials were required for each line and equipment including wastage amounts. As we had employed three insulation contractors on site, Insultec separated the takeoff and material list for each insulation contractor.

Insultec prefabricated the polyisocyanurate and cellular glass piping and equipment insulation, including the equipment heads. Insultec supplied and shipped all the materials, including mineral wool insulation, polyisocyanurate insulation, cellular glass insulation, aluminium cladding and accessories. Insultec shipped only quality materials from Europe and North America and provided all shipping and customs clearance documents as per our requirements including quality certificates, packing lists, EUR certificates and ocean bills of lading.

The Insultec personnel were always cooperative, thorough and resourceful and always provided us with assistance and clarification whenever required.

We are pleased to recommend Insultec for performing similar orders and we hope to work with Insultec in the future.

Sincerely,

David Bazaine Zea
